

A single plug-in module for any **new** or **existing** SV Series spa control offering both

Control your spa remotely from anywhere in the world

and experience immersive high definition sound quality with

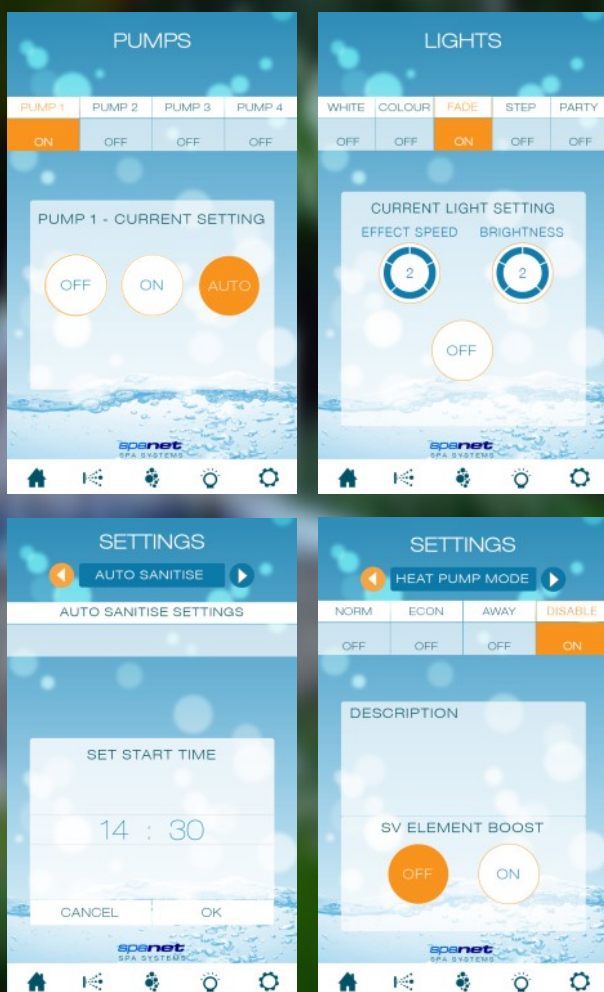

Bluetooth your music or audio stream direct to your spa

The SV SmartSTREAM is an all in one purpose built spa pool sound system and amplifier with built-in Bluetooth and WiFi. This system has been built ground up solely for spa pool applications. It has been designed with spa pool conditions in mind such as high ambient temperatures, humid / wet environments, and a long service life.

It is a single module which simply connects to one of the digital expansion ports located on any new or existing SV series spa control. So matter how old or new the spa is, if it has a SV Series spa control fitted the SV SmartSTREAM will unleash the power of WiFi/3G/4G remote access control and Bluetooth music and audio streaming.

Via the SpaNET SV Link iPhone or Android app the inbuilt Wifi module allows you to connect to, and take control of, your spa locally or remotely via the Internet, providing access to your spa from any location at any time.

The SV Link app becomes a remote control for your spa enabling complete control over all spa functions such as turning pumps, blowers and lights on/off, adjusting light modes, effect speed and brightness.

In addition the app provides total control over every possible spa configuration setting. No shortened menus or minimal access to limited settings, the SV Link app allows complete adjustment of all spa control settings as if you were standing in front of the spa.

Simple to use touch screen menus make adjusting temperature, selecting your desired heating mode, programming filtration, sleep or power save timers and other such settings a breeze. Even if you have never owned or used a spa pool before, from the moment you open the app you'll be driving the spa like you were a professional.

The SV SmartSTREAM also includes SV HiFi - a high definition sound system for your spa offering exceptional sound quality with subwoofer support. Bluetooth is built in so music can be streamed from any Bluetooth smart device (phone, tablet, PC etc).

Take your smart device into the water using a water proof pouch or leave it safely with your towel! With your smart device in the spa you can play a movie using the SV HiFi for impressive sound. Or use it as a juke box to play your favourite tracks or to stream audio from the Internet.

With your device away from the spa the SV HiFi still allows you to skip tracks, play and pause via the pool side touch pad. The pool side touch pad design is based on our proven SV-T spa control touch pads to give years of trouble free operation. Its operation is simple and intuitive yet all system functions are available giving complete control from inside the spa pool.

As well as Bluetooth, three other audio sources can be connected to the SV HiFi such as a DVD player, TV or MP3 player. Selecting between the audio sources is easy, just push the button on the pool side touch pad to select the source.

As the SV HiFi is a sealed unit within the SV SmartSTREAM module underneath the spa, troublesome stereo head decks and water proofing difficulties are eliminated. By utilising sophisticated transducer technology the sound output is immersive with exceptional clarity, and problematic pop up speakers or expensive waterproof cabinet speakers can be avoided.

The SV HiFi system comprises of:

- Dedicated pool side touch pad for control of all functions
(mute, volume, treble, mid-range, bass, subwoofer, balance, fade, source selection, play/pause, previous / next track, etc)
- High end digital audio processing
- Three audio input sources plus Bluetooth (music)
- Four channel, 50W per channel, stereo amplifier
- 150W subwoofer amplifier

The system can be supplied with:

- Four audio transducers with mounting brackets
- Ported passive subwoofer
- Waterproof 12V power supply with AMP power cord
